

TRAILS BY DONKEY
AN ALTERNATIVE OF TRANSPORTATION

Aware of the harsh terrain and economic difficulties in the region, THE FOUNDATION OF “LOS YARUMOS DEL CITARÁ” wants to help in the breed of the species that is particularly used to provide a transportation option in this area, the mules.

Currently topographical conditions do not allow an easy access to the area, which brings peace of mind to the protective ecosystems foundation, otherwise we would

find a harder fight as this is easily accessible to the public and it would lead to rapid growth in hunting and logging rates.

However, for the community is difficult to move because the roads are in trails and only a few farm families have a specimen of the equine that facilitates their mobility, being in most cases, the difficult economic situation an obstacle to get them.

Thinking about welfare of the area families for their moving on market days and transportation of goods harvested, the foundation has a mule specimen that is used as a breeding animal when is needed by the community without charge, giving as result, several mules for heavy duty in these lands.

This is how, there are many families that benefit from this free service, increasing the number of mules in the area and gradually lead to an abundance of them, diminishing mule prices and allowing people get a mule easily that would optimize their travel.
